

# MARLEY AKASISON SIPHONIC ROOF DRAINAGE REFERENCE PROJECTS - NEW ZEALAND

Akasison is a concealed system that rapidly drains water from commercial roofs. It is ideal for buildings with large roof areas such as offices, warehouses and public buildings. The siphonic system allows for flexible routing of pipework so gives you design flexibility. Akasison gives you more usable space within a building as it uses smaller diameter pipes. Fewer downpipes are needed and the collection pipework can be installed horizontally and close to the roof with zero gradient.
