

DWV Expansion Coupler T.

The answer to an ever expanding problem

A Typical Sanitary Plumbing System Stack

The New Marley 111.100JL combination expansion coupler

"We are very pleased to hear that you are now supplying a Purpose made expansion coupler for the use with multi level stacking projects.

In the past we used the only coupler available that requires a stack to be supported with an expansion gap allowing for inside fitting. However this did not allow for error during installation, as previously it was difficult to monitor whether the gap was built in or not.

Only now are we able to use the new fitting being confident in the knowledge that the Heavy Duty cardboard spacer secures the stack in the correct position whilst installing, then we can remove the cardboard spacer afterwards knowing that expansion will be controlled.

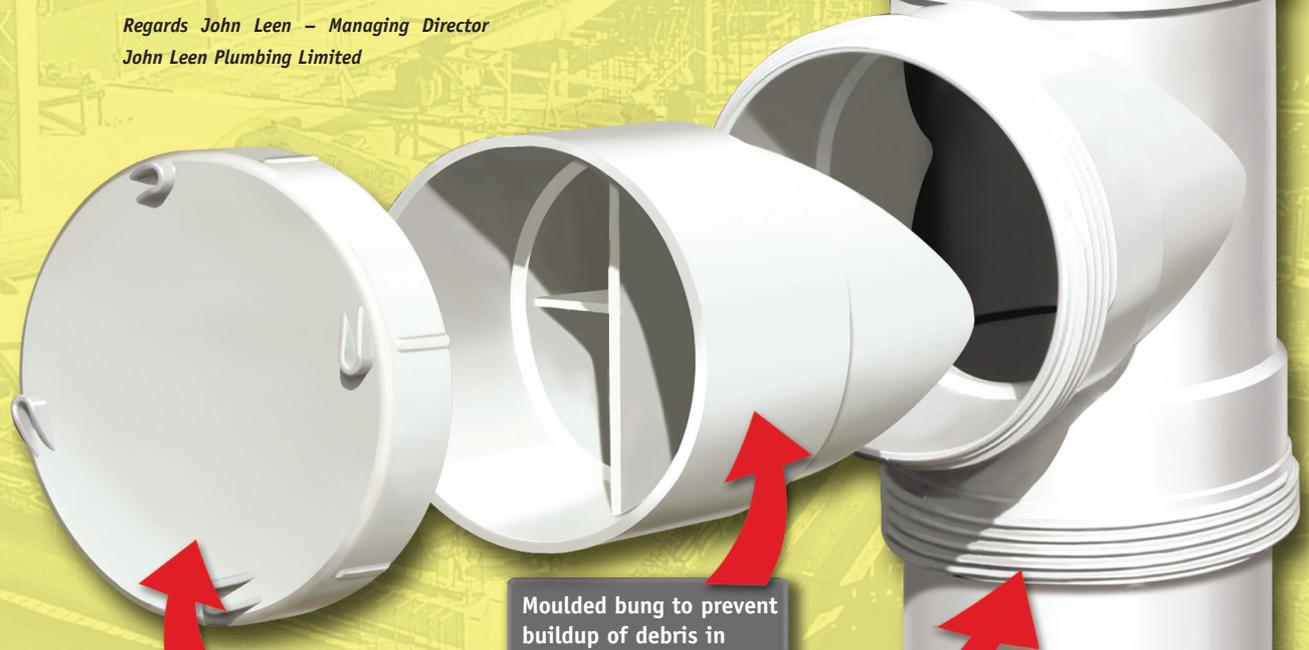

We see exceptional value fitting the expansion coupler in all stacks, sewer and storm water projects for controlling expansion and allowing access to the stack for greater inspection and testing purposes."

Regards John Leen – Managing Director
John Leen Plumbing Limited

Removable cardboard spacer preset for expansion requirements

Direction of flow is embossed on the fitting for trouble free installation

An inspection opening for clear point of access or additional lateral lines

Moulded bung to prevent buildup of debris in inspection branch

Threaded end for use if needed
